

10 Ten Reasons to Choose CAST LED's

We design our products, pour the metal, machine, assemble, test, pack, and ship.

1. SOLID BRONZE BEAUTY

Timeless beauty - ages gracefully - you will love how they blend into your landscape.

2. SOLID BRONZE DURABILITY

Impervious to damage and corrosion - they will never break, bend, chip, or peel.
Built to last forever.

3. CONTROL & DESIGN FLEXIBILITY

Set perfect brightness and beam spread at installation & later - as the landscape changes. Glare Free. See the Effect, not the Source.

4. OPTICAL PERFORMANCE

Industry's finest optics deliver exceptional illumination for subtle & effective designs.

5. HEAT MANAGEMENT

LEDs will not overheat, avoiding color shift, lumen depreciation and premature failure.

6. EXTENDED VOLTAGE RANGE (10 VAC TO 24 VAC)

More fixtures can be connected with less labor & materials - saving you money.

7. OVER-VOLTAGE & EMI PROTECTION

LEDs protected from spikes and surges will not interfere with wireless devices (FCC), eliminating problems that other manufacturers choose not to.

8. HIGHEST QUALITY LED CHIPS

Illumination will be consistent over time - brightness and color will not change.
Tight LED "binning" delivers consistent color across all CAST Products.

9. INTEGRATED MODULAR APPROACH

All drivers, LED arrays, and optics are designed to be replaced in the field in cases of failure or future upgrades. CAST does not make "throwaway" fixtures.

10. ENGINEERED AROUND THE PHYSICS OF THE LED

CAST LEDs are designed around the new LED technology, not limited to yesterday's halogen fixture designs.
